# Your Submitted Press Release

**United States, 13th Jul 2026–** **Birthday Analyser** has introduced an online reference tool that enables users to browse published calendar dates and view a collection of astrology- and calendar-related information associated with those dates. The resource is designed to provide a structured overview of multiple traditional calendar systems and astronomical references in a single location.

The Birthday Analyser calendar allows visitors to browse dates in a published format, such as "28 Aug 2017," and access a snapshot of information connected with each selected day. The tool combines Western astrology, lunar calendar references, and selected Chinese calendar elements into an organized date-based presentation.

For each available date, the calendar presents the corresponding tropical sun sign, moon sign, and moon phase based on a standardized reference time. Users can also review a concise star-sign chart that summarizes planetary positions and selected astronomical data for the chosen day. The format is intended to make date-specific information easier to browse without requiring manual calculations or searches across multiple resources.

In addition to Western astrological references, the **Birthday Analyser** includes Chinese zodiac context covering years from 1960 through 2020. The calendar provides year-animal associations alongside lunisolar calendar information that corresponds to each published date. These references are presented as historical calendar data for users interested in comparing multiple traditional systems of date interpretation.

Another component of the calendar is the inclusion of a lunisolar BaZi day pillar column. This element displays the day pillar associated with the selected date, allowing users to view one of the key components commonly referenced in traditional Chinese calendrical systems. The information is displayed as part of a broader date summary rather than as an individualized interpretation.

The published pages also include additional contextual details, such as lunar dates, solar terms where applicable, and selected astronomical observations associated with the chosen day. By presenting multiple forms of calendar information together, the Birthday Analyser aims to provide a convenient reference for individuals researching historical dates, astrology-related topics, or traditional calendar systems.

The date-based format enables users to explore different years without entering extensive birth information. Instead, each published calendar page serves as a standalone reference that summarizes key characteristics associated with that specific date according to the supported calendar and astrology systems. This structure may be useful for those comparing dates across different years or reviewing historical calendar information.

**Birthday Analyser** states that the resource is intended as an informational reference, bringing together several commonly consulted calendar traditions into a single online browsing experience. The platform organizes date records in a consistent format, allowing

users to navigate between years and examine corresponding astrology and calendar data with ease.
